

AMERICAN WIGEON

Coloring Page

American Wigeons are brownish-gray with a green stripe behind the eye and a white cap. They are found throughout North America. Their population is stable with their range expanding into the north-east and Canada. American Wigeons have short bills that help them eat vegetation from fields easily. They make their homes in marshes, lakes, and fields. American Wigeons eat mostly plants such as algae, eelgrass, and wild celery. They migrate in flocks, moving during the day.
