

BLACK ROSY-FINCH

Coloring Page

Black Rosy-Finches are plump and black with pink on their wings and belly. These finches are found in the high mountains of the western United States. They are an uncommon bird due to their habitat, but their numbers appear to be steady. They make their homes in alpine snowfields and rocky summits. Black Rosy-Finches have a special pouch at the bottom of their mouth to store food, such as extra seeds. They migrate down the mountain in late fall.
