

# LESSER GOLDFINCH

## Coloring Page

Lesser Goldfinches are yellow and black with a vibrant yellow underside. Lesser Goldfinches are found in the southeastern region of North America. They are most common in Texas and California. Their population is stable and common. They make their homes in open woods, gardens, and near streams. They gather in oak, cottonwood, and willow trees. Lesser Goldfinches eat mostly seeds, but also some insects. They are considered permanent residents, not migrating out of their range.
