

# STELLER'S JAY

Coloring Page

Steller's Jays are blue with a black head and a triangular crest. Steller's Jays are found near evergreen forests in the mountains of the western United States. They make their homes in pine and oak forests. Their population is widespread and common. Steller's Jays make their nests out of mud. They stay in the high canopy and fly down in long, lazy swoops. They eat nuts, seeds, or handouts from humans! Steller's Jays are permanent residents, but may move to lower elevations in the winter.
